+977 9767393973

---

## SKILLS

- **Languages** JavaScript, TypeScript
- **Tools/Frameworks** Express.js, React.js, (Runtime: Node.js)
- **Databases** MongoDB, MySQL, Firebase, Supabase
- **Other** Deep Learning, Python, Basic AI Automation

---

## EDUCATION

|                                                                           |                         |
|---------------------------------------------------------------------------|-------------------------|
| <b>Bachelor of Science in Computer Science and Information Technology</b> | 2022-2025(Running)      |
| Tribhuwan University, IOST                                                |                         |
| Central Campus of Technology                                              | Hattisar, Dharan, Nepal |
| <b>Higher Secondary Education</b>                                         | 2019-2021               |
| Science                                                                   |                         |
| Koshi St. James                                                           | Itahari, Sunsari, Nepal |

## PROJECTS

### Portfolio Website

Personal Project — View at [www.darsahan-dhakal.com.np](http://www.darsahan-dhakal.com.np)

- Designed and deployed a responsive portfolio site to showcase projects and skills
- Built using coding languages and tools for hosting

### Weather App

Node.js, Express.js, HBS, HTML, CSS, Postman-Request

- Developed a real-time weather forecasting app using an external API
- Features dynamic routing, error handling, and user-friendly views.

### Expense Tracker

JavaScript

- A powerful and minimal command-line expense tracker built with pure Node.js
- Designed to help you take control of your finances directly from the terminal

### Final Year Project: Brain Tumor Detection using

#### Deep Learning

Python, Deep Learning, MERN, CNN

- Brain tumor detection system using Convolutional Neural Networks (CNN) and transfer learning with VGG16.
- Designed for real-world use, the system integrates with a MERN-based web interface, delivering structured outputs and over 95% classification accuracy.

### Luxury Hotel

TypeScript, React.js, Supabase

- Modern, full-stack web application built with Vite, React, TypeScript, and Tailwind CSS
- Integrates UI components from ShadCN and Radix UI, with form handling via React Hook Form and Zod
